ABSTRACT

The vehicular adhoc networks are the self configuring and decentralized type of network in which vehicle nodes join or leave the network when they want. Due to decentralized nature of VANET security, routing and quality of service are the three major issues which reduce performance of the network. In this paper, various routing technique has been reviewed and discussed in terms of description and outcome. The routing protocols are broadly classified into reactive, proactive and hybrid type of routing. It is been analyzed that reactive routing performs well in terms of various parameters.

Keywords : VANET, Green Lifecycle, hybrid routing, ETERNITY

I. INTRODUCTION

Environmental education challenges many of the existing deeply entrenched structures, systems and methods in education. Environmental issues have reached its potential level; it is indeed everyone is conscious of its adverse effect. It should be realized the responsible role of every individual to do something about it. Environmental hazards have become one of the worse effects in emerging society. People must be aware of environmental degradation.

Substitute to strengthen the aggressive nature of environment is only value imbibing aspect. Proper value-oriented support should be added in the heart and minds of people. Green city should be our motto. We need urbanization and industrialization, but it should be proceed hand-in-hand based on Green principle. Environmental protection should be developed among youngsters through proper campaign and awareness. But still we not emphasis to it. Right now we too late to change our protected mind towards environmental issues.

Systematized effort to gain new environmental education is vital need. Let's pick up our mind and heart towards our green world. They are only our most powerful existence. Let's hope better tomorrow through better environment.

Environmental conservation should be silently grown among us. It should be very fit to the exiting environmental gap. We should be gradually free from that far distance, yah; if winter comes, canspring be far behind. Think then Act. Surely that conscious act will be a perfect Act. Self protect comes from self responsibility. Not be fruitless seed but be a purposeful and rational human being. We must follow the principle of Action is thy duty, fruit is not thy concern. Great desires to conserve our damaging environment of we people are always transcended.

Let's keep our precious gift of resources for coming generation .Surely, we can consume them but only in a judicial way, Not try to over exploit. Remember here is enough to the needs of we all; but not to the greedy people .Sustainable development should be kept in all we mind and go progressively. Conceive the environment through the senses of peace than the mind of robbery. Your insight must be very frankly open to the green nature of environment.

II. NEED AND SIGNIFICANCE OF THE ARTICLE

The present article is relevant to encourage healthy environment behavior among all people. Our consumer culture must be eco friendly, not support profit consumerism .our consumerism attitude only support environmental degradation. This reveals us that the urban city should be fit to go green concept. This become more

adequate when modern industrial societies recapture the ecological insight among youngsters. Religious beliefs also supports environmental stability during environmental crisis, Number of religious institutions and pastoral counseling strongly argued to retain environmental sustainability. There is a very urgent change among the destructing attitude of us greedy people. Our youngsters must become eco supporters and a group of love to nature. It is worthwhile to note subjects those have environmental fabrics surely promoted among our fellows. The whole fabric of a geographical study is based on man –environmental relationship. Right from the beginning, geographers have not only discussed the various components of an eco system and their impact on man but also examined the environmental problems, both global and regional as well as the question of sustainable development. IT is an essential reading for the students and all because it will be great value to a broader audience. Eco-psychological approach create positive attitude towards environment. This approach promotes critical and logical thinking among all people. Strong environmental protection must be supported. No type of degradation promoted and sustain eco stable attitude among students

MAJOR OBJECTIVES

1. To realize the urgent needs of environmental awareness among all people.
2. To promote the effectiveness of eco psychological approach for developing environmental ethics among all members in the society.
3. To identify the relevance of environmental stability for encouraging sustainable development concept.

III. METHODOLOGY

Methodology involves systematic procedures starting from the initial identification of the problem to its final conclusions. The validity, reliability and accuracy of the findings depend upon the method adopted for the study. It includes proper selection of sample, use of appropriate tools and techniques for the study. Survey-cum-Interview methods were mainly used for the collection of data. It collects data from a large number of cases and is concerned with the typical condition or practice at the present time. Reference methods were also used in this study. Population of the present study is all

the selected members from society. The representative proportions of the population are called sample. The process of selecting a sample from the population is called sampling.

IV. ANALYSIS OF PROBLEM

GREEN LIFE CYCLE

In order to achieve the aforesaid objectives, the preachers of environmentalist stressed on man are rational thinking. They argued for cultural values as environmental values. Attitudes should be optimizing with ecological stability. Likes and dislikes must be equalized with eco concept.

In order to attain green life it is vital that our imprint on Earth –Earth's imprint on us is to be environmental touch. The spectrum of consciousness towards environmental issues is the essential key. Human mind that stored the energy itself against environmental destruction. co – self development should be very silently grown as sensory – self.; I want, I need a self – absorbed minded person. Sensory – self aspect should move to Exploratory – self. Purely it is a manipulated form of eco – self.i.e; I can, I must, I control etc. Then gradually emerge the self of relational and productive. Relational – self means learned eco- self. Then the self changed to the path of young adult i.e., productive self.

Now the time has come to extend Reverence, Responsibility, Respect and dignity to all nature. It is very late to realize the idea that protecting nature means protecting ourselves. In order to raise awareness and engage others in environmental programs we need to intervene early and support teachers, parents to enable them to engage young children in developmentally

appropriate activities at home, school and in the community.

Engage the heart, mind and spirit in experimental learning that is based on connection, care and eco-self rather than mere competition and eco self. The wonder of nature remain as naturally than the interfere of humans. Let's pray for deep peace of the running wave, flowing air, of the quit earth, of the shining star, of the gentle night, moon and stars.Yah; pour their healing light among we all.

Quite frequently these days' people strongly talk of green life cycle, both in formal and informal way. This is proved several environmental studies very precisely. But in most cases very little attention is paid to an important dimension relating to Green city. It may be noted, in the context of planning and development that the significance of environment studies lays in its quality and not in quantity. The need, therefore, is for those concerned with environment to pay due attention to designing the appropriate psychological feeling for improving the quality of environment. Only words may differ from time to time not the action. Yes yet, the basic approach towards environmental protection remain the same.

Keeping all this in view, we all, irrespective of their discipline develops the most appropriate mentality towards eco-concept. It is hoped that the humble effort made in this field will assist all in the accomplishment of exploratory as well as result oriented action.

Challenging our perception a new mode surely fresh green tough for being with the earth and ourselves. Definitely we save to wonder why only few people recycle and some people don't.Let's think if the environmental movement is really working or progressing.This is very adequate time to integrate nature into our school work, occupation, faith and other areas. Let's shape our mind and body towards the green community where trees, lakes, prairies, hills and valleys evergreen.

Take a few minutes to refresh our traditional incorrect ideas towards successful green dimension.All we think back over our wrong concepts.Rethink and write your thoughts as I learned fit phrases to environment.I discovered the destructive surroundings and I take

initiative ideas to conserve them.I now realize the urgent needs of afforestation.I would like to find out more about eco stability.Of course stop the race to the destructive urbanization and polluted industrialization.

Men always want to be environmental protection and environment needs man's last support. Greedy people like a sharp knife. kills environment without drawing Blood. At the touch of his love on environment becomes a rhythmic fodder. Don't mix bad habits without bad mood; we will have many opportunities to change our habits for protecting our mother. Consumerism life will come and go in life, but the sustainable development will always stay.

The strong emphasis on environmental studies had played and being played supreme role in man's proper survival.Rightnow we have begun to realize that situation otherwise it will adversely affect our future. Decisions and selection of lifestyle should design in everyone's mind, without environment there could be no modern science and development.

All you must forgive your enemy approach and profit lifestyle on environment instead treat them as your own.

ONE RIDDLE ME THIS

What is the beginning of ETERNITY, The end of TIME and SPACE,

The beginning of every END and the end of every RACE?

**Yes; of course it is 'E'. Here 'E',
Magically stands for ENVIRONMENT.**

ANOTHER ONE RIDDLE ME THIS

What is the beginning of SUPREME, the end of ANALYSIS and SYNTHESIS,

the beginning of every SOCIALIZATION and the end of BADNESS?

Yes, dead right it is 'S'. Here 'S' stands for sustainability.

You may think man can destroy the eco planet, what intoxicating vanity. Let me share you about our green earth, really it would be very different from what it now, but the earth would survive our folly, only we would not. If we go through the green nature, the earth will not miss us.

It is horrifying that we have to fight our own government to protect the green earth for future existence. As a responsible person if we take steps to save the remaining wilderness, we may very shortly enter in dangerous lifestyle. We were live in a statement of look a gift horse in the mouth; we never do more than drive to its edge and look in.

I realized that actually forests are the lungs of our earth, purifying the air and giving refresh touch and power to our people. If the earth creatures disappeared, next then man would only have limited years left to live. No doubt what we are doing to the environment is a mirror replica of what we are doing to me and ourselves. We all should understand that the earth provides enough to every man's need and remain sustainability. If we hurt the enough of nature, then never is along word.

Here is in our country, the beauty of nature creates its richness or its romance, the rhythmic nature of the earth is never dead. Do not let selfish men or greedy lifestyle; hat may swallow the beauty of environment.

Let us say by everyone that iam glad, I will not be young in a future without environment. Beauty of nature lies under our feet and goodness of mind. How could this earth of ours, which is only a speck in the heavens, have so much Variety of life and exciting creatures.

I am sure and I think that no better form of personal involvement than that of gardening. An individual who is caring environment, is improving a piec3e of the world, he is also expanding for himself, the meaning of food and the pleasure of eating. Infct,we, we are creatures of God,yah I firmly believe god is nature and nature is its replica. It means that there is much good work to be done by us and must begin to do it.

V. SUMMARY

The study was intended to ascertain the relationship between man and environment. While studying about the impact we need to be aware of potential hazards, how, when and where they are likely to occur. we have seen the huge loss to life, property and even all organisms. Let us understand the environmental dangerous situations and what are the factors that lead to it and its impact. The problem can be overcome by judicial way of exploitation only. Full exploitation of these energy conserving environment reduce the future demand. Our population has grown in an extraordinary fashion way but we aware about the depleting resources. Many eco friendly areas face acute destruction and future equilibrium supply is not guaranteed. Let us pick up our mind to the motto Optimized Resource Allocation.

VI. SUGGESTIVE IDEAS

Carefully read you and your surrounding; shape you to become environmental goodness underline or highlight eco ideas that are especially meaningful. Reflect critically on what you have read and experienced. You will be asked themselves to take quick action. Be prepared to support your opinions and positions with logical ideas to strengthen eco aspect. Be courteous to environment. Not try to put down your green mind. The main premise of this article is that while today the human mind is shaped by the modern social world, it is adapted to the natural environment in which it involved.

Allow your mind and spirit enough to begin and finish evergreen thoughts. Use your best active listening skills

through eye contact, nodding and providing feedback
basin on maxims of green.

*Let's be green in thought
Let's be fresh touch in words.
Let's be nature in nature.
Let's be highlight in Green light.
Let's be positive in green site
Let's save forest,
Animals,water,trees,fuel,energy.....
Go Green.....
Green life.....green in mind
Life cycle in Green.....green touch in life*

*Make it easy being Green
Yah, Green Good for home,business,town and
planet.....
Choose Green cycle for beautiful results.....
Support the term Green fruit to youngsters.....
Welcome Green, Live in Green, Go Green.....*
